

Problem Statement

Vendor Onboarding & Compliance Portal

Industry Domain: Supply Chain / Procurement / Manufacturing

Problem Statement

Every mid to large-sized company that works with external vendors — suppliers, contractors, raw material providers — goes through a painful manual onboarding process. New vendors submit documents via email, WhatsApp, or physical files. Compliance teams chase them for missing certificates. Finance teams can't release payments until onboarding is complete. Nobody knows what stage a vendor is at.

causes:

Companies grow faster than their internal processes. What worked with 10 vendors breaks completely at 100. Most organizations never built a system — they just kept using email threads and spreadsheets because "it works for now." By the time it doesn't work, the mess is already deep.

Current Challenges Faced by Organizations

Vendor documents arrive in unstructured formats across multiple channels. Compliance officers manually verify GST certificates, PAN cards, bank details, and trade licenses one by one. Duplicate vendors get created because there is no central registry. Approval chains have no visibility — a vendor doesn't know if they're approved, rejected, or stuck somewhere in between. Audit trails don't exist when regulators ask for them.

Solution suggested

A centralized web portal where vendors self-register, upload required documents, and track their onboarding status in real time. Internal compliance teams review submissions, request corrections, approve or reject vendors, and maintain a complete audit trail. Finance and procurement teams see only fully approved vendors.

Main Features

Vendor self-registration with profile creation. Document upload for GST, PAN, trade license, bank details, and insurance certificates stored on AWS S3. Automated completeness check that flags missing documents before submission. Multi-stage approval workflow — compliance review, finance verification, final approval. Status tracking dashboard for vendors showing exactly which stage they are at. Email notifications at every stage change. Admin dashboard showing all vendors, their current stage, pending actions, and overdue reviews. Audit log of every action taken on every vendor record. Vendor search and filter by category, region, status, and approval date.

User Roles

- Vendor — self-registers, uploads documents, tracks status, responds to queries.
 - Compliance Officer — reviews documents, requests missing items, approves or rejects.
 - Finance Team — verifies bank and tax details.
 - Super Admin — manages the entire system, user access, and approval rules.
-

AWS Usage

All vendor-uploaded documents stored in S3 with private access. Presigned URLs generated for compliance officers to securely view documents without public exposure. Separate S3 folders organized by vendor ID and document type.
